

AEROSPACE

Ongoing investment in equipment and training has resulted in a British business with proven precision engineering expertise that now exports worldwide to demanding customers in the aerospace industry.

As a result, Bowers & Freeman is now the leading British manufacturer of premium quality heading punches, second operation marking stamps and other components for the aerospace fastener industry.

Our special processes ensure excellent character definition giving very clear detail on the fastener while the surface specification can be tailored to customised, in-house production requirements; standard smooth, coarse or polished finishes are all available.

Through extensive research and development Bowers & Freeman has developed the **Superpunch** (Patent Pending).

When producing countersunk fasteners the unique **Superpunch** will produce ten times more than comparative punches available in the USA and its extended life reduces costs and increases production. Continuous development aims to extend these benefits to other styles of punches.

Further innovation has resulted in a new punch to produce fasteners with a non-patented screwdriver recess. This unique, patented process allows small quantities of punches to be produced cost effectively for the first time.

We also produce first process heading punches, wafers, fillet rolls and other components to the same premium standard.

In many cases, we can despatch orders rapidly yet with the high standard of production that the market has come to rely on from Bowers & Freeman.

**BOWERS &
FREEMAN**

ENGINEERING EXCELLENCE SINCE 1948
