

DATA BOXES

Bowers & Freeman engineers are experts in the production of data boxes.

Our unique engraved data boxes have been especially designed for the hot stamping of variable data (date, price and code information) on food, pharmaceutical products and cosmetics.

They provide a sturdy and efficient method of easily changeable hot foil printed and embossed data applications.

In addition, they are able to withstand the effects of high temperatures over prolonged periods of production.

The Bowers & Freeman exclusive, patented locking mechanism enables the rapid change of details yet secures the wheels accurately during production.

The character layout gives minimum space between the characters for maximum print within a restricted area and sharp faced de-bossing typeface is available. Character sizes vary from 1.5mm to 6.0mm high.

Our engineers offer a specialist design and manufacturing facility to create bespoke data boxes or to solve particular production challenges.

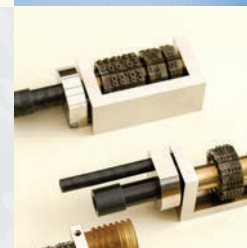

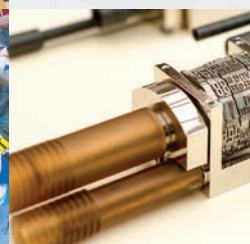

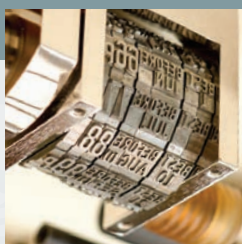

Expert, technical advice on these products is always available upon request.
